

Silencer - Installation Instructions

For Models: ME500XF, ME800XF, ME2000XF, ME2500XF, ME4000XF, ME6000XF

Application

Exhaust Silencers are intended to be used where reduced exhaust noise is required.

Installation (all models)

1. Remove the outlet grille from the TFP Eliminator and retain the grille mounting bolts. They will be used to secure the Silencer to the TFP-Eliminator.
2. Thoroughly clean the top surface around the exhaust outlet.
3. Apply a large bead of the oil resistant sealant supplied with the Silencer to the top surface around the exhaust opening. This will form a seal between the TFP Eliminator and the Silencer.
4. Determine the best direction for air to exhaust from the Silencer.
5. Place the Silencer on the exhaust opening of the TFP Eliminator taking care to line up the bolt holes.
6. Secure the Silencer in place with the grille mounting bolts.
7. The installation is now complete.
